

Name _____ Date _____

Directions: Find 26 insect names, each beginning with a different letter of the alphabet. Use the names of specific insects. As an example, "beetle" should not be one of your choices. Instead, use the name of the beetle, such as "Lady bird beetle" or "Junebug". To find the names, search the internet, the library, and use other references.

Descriptions: As you find each common name, also add some interesting information about each insect. You can write about its anatomy/body, where it lives, what it eats, or its life cycle. Is this insect a pest? Is it beneficial to humans? Add your own interesting information as you find it. Be sure to include the resource where you found the common name.
